Studio Electric organ preset library Vol. 4, 104 presets[Free] Powerful and Spaceage sounding presets written by professional sound designer Spasimovich. Do you like melodies that bring together the sweet, dark side of organ? Do you want to build your own synthesizer? Do you like the sound of acoustic strings? If any of the above answers are yes, then you are really going to love this set of 104 presets. You can download this sound library for free at www.synthgears.com Our sound library is inspired by the classic synthesizers, the Propellerheads SynthMaster, the Korg PS-3, the Roland VM-330 and others. It is direct and direct-instrumented, versatile and with superb modulation capabilities. The preset is optimized for real-time integration with your software synthesizer, and very convenient for any producer and arrangers, either virtual or hardware, using any DAW or music software on any platform. To make music you do not need previous experience with synthesis, using it is a process as natural and standard as making a song. All of the presets range from delicacy to voluptuousness, harmonies from lacerating to tender to opulent. Organ sounds are something a bit different from you expect. Out of all the presets we have selected here, many different sounds - such as shy steady knolls, sentimental piano functions, noise-melodic chains, menacing atmospheres and many more. This set is very complete and distinguished, as there are also functions modeled in additive synthesis and other types of modulation, such as Spectratone, LFOs and so on. As a result, we offer both, highly quiet and powerful sounds and sounds that are rich but have a lot of character, and anything in between. If you are looking for a new instrument to explore, listen to the presets here and utilize them in your next track. And if you're still excited about learning synthesizer or just want to visit these beautiful and wonderful machines again, then this collection is the way to go. With our full repertoire of 104 sounds, we offer you melodics for real-

time use on synthesis, synthesis with additive synthesis and synthesis with other means of modulation. Do note that just like all our library products, this product is in BETA. Some of the sounds may not be implemented 100% accurately, some sounds in addition have LO
