Starting from the basics, we will guide you through the tutorials, breaking down the vocabulary you need to know and showing you how to apply it. If you have any questions, comments, or suggestions, we are always looking to make the experience better for our viewers. Comment below or send an email.Q: Develop web services in node js in a environment to which no client is present How can we develop and test web services using node js in a environment where no client is present? Can we develop something that does not require a client to interact with? And how can we develop and test it? A: A number of "server-side web frameworks" exist that do just that. The one I've seen most often is Express.js (for nodejs) More info can be found at Express is the simplest way to make real-time web applications using Express. It's a minimal, yet feature-packed web framework with an intuitive asynchronous architecture. A good example of an Express application is Or, Alternatively, you can also directly use the node library and do server-side nodejs. #!/usr/bin/env bash if [$#!= 1]; then echo "usage: $0 pkg" exit fi pkg=$1 curl -LO | sh -s -- --install # The values of ${DOCKER_HOST} and ${DOCKER_API_VERSION} may be # overridden using environment variables with the same name. if [[-z c6a93da74d
