You never see the list of drivers. there are none in the list, the only option I have is to click on the windows on the left side of the screen, and there is nothing to click on. when I do that, it gives me a message that says that there was an error while loading drivers. I have tried everything but I cannot do anything, please help I have a problem. I have Windows 64 bit, I downloaded the driver with your e-mail, but I still don't have it in my list of drivers. I have Dolphin64-32 as the selected architecture, and I cannot do anything after clicking the uninstall button, there are two error messages that I don't understand. The first says that the device is not installed, and the second says that HIDCom class driver is not installed. A friend is asking how to install the driver without pressing the button uninstalling it, it says it is not installed so I cannot do anything and he cannot send the serial number to his computer I downloaded the windows 64-bit driver, unpack it and it looks fine, when I click on the driver with the size there is no option to open it, there is a.inf file that says it is incompatible, there is a microsoft.com/en-us/windows/manual/a4176133.htm, page 172, but there is nothing on what to do now Another, more interesting part of the project was the driver for the Zygo Gamepad, which was made by a company called Zygo. With the name of the company obviously nothing was going to be a challenge for this one. With the help of one of the original authors and a couple of friends we were able to translate that into Fermi. Fermi is the widely used graphics programming language. It is used for game programming and even some things for Python. It is used for both web development and has an embedded version as well.

i have a question. how can i use the hid wiimote driver with an ir receiver? it works fine but i have to have 2 drivers installed: hid wiimote driver and ir receiver. is there any way to use the two together? hi, i had problems with the drivers for my atari lynx + 2 controllers. now i have downloaded your drivers and when i plug in the atari controllers, they are not detected. do you have any ideas how to fix this? i just tried to install the hid wii driver on a 64 bit pc. the installation ran smoothly, but after rebooting, i get the message that the driver has to be reinstalled. i uninstalled and installed the driver again and the same thing happens: after rebooting the error message appears. i have used the "check" option to see if the files are missing. can you please help me? i have installed the hid wii driver on my windows xp machine. i have an ati radeon x1950 xt graphics card, and an ati radeon hd 2400 xt video card. i am using the hid wiimote driver. the wiimote works great, and i can use it with all the programs i use (itunes, photoshop elements, etc..). the driver includes hardware handshaking for bluetooth devices. this ensures that your hardware and driver supports bluetooth and minimizes the chance of your device being detected as "unsupported" or not working. if you are having issues connecting your bluetooth device to the wii remote that

includes this driver. i have a problem changing the driver like you describe above. the device manager window doesnt let me choose wiimote in the list of drivers, only bluetooh device. also it says treiberfehler / driver issue in the bluethooth devices window. so the new driver seems to be installed already when i install the default driver, it doesnt say driver issue. anything that can be done from here 5ec8ef588b
