Talking Tom Cat 240x320 Java Touchscreen |BEST| Download

to change the text, edit the texts in the resource packs. the end text in the java edition version was first written by arnoz, and then updated by matthew luberda. if you want to edit it yourself, you can use the file texts/end.txt in the resource pack. the source files are located in assets/minecraft/texts. since version 1.13 of bedrock edition, the end text is no longer added to the end of the final world or created when the world is saved. instead, it is only added to the save file. as of march 2016, neither htmlunit nor jdom has been updated since 2011, when the java 8 release of the api was first released. this means that the api has been stable for roughly 8 years, and that if a screen scraper were written today, it would still have to be written using htmlunit, or jdom. which leads to the first of my three problems with using htmlunit as a screen scraper: it's too old. the most recent update of the api has been in march of this year. if a screen scraper were written today, it would still have to be written using the code that was written 8 years ago. which leads to the second of my three problems with using htmlunit as a screen scraper: it's too old. and the third of my three problems with using htmlunit as a screen scraper: it's too old. so here's my suggestion: write your screen scraper using java 8/9, and then extract the data into csv or json files for importing into a spreadsheet or database. the spreadsheet/database can be stored online on a web server, or you can build a local database. if you plan to store the data locally, you could even use the file api to create a file in the local file system, and then use the file.copy() method to copy that file to the computer that will be serving your data. that way, you could host your data on your server, but your server could be a raspberry pi or an in-home server, or even a computer that is not connected to the internet. and by using the java 8/9 api, your data would be secure, and your program would be entirely portable.
