Overall, the reviews of paid apps tend to bounce around at the end of a year. While you have to pay for a professional program such as WinCam X7 for your Linux computer, you can always get by with using Microsoft's 365 subscription for the classic Windows 10 operating system. The interface and layout is very friendly and easy to use. Along with image adjustments, you can also print, share, add text to photos, and create albums. It's also got a neat feature in it where you can draw on the screen and save it as a QuickTime video file that you can then play in Hyperlapse mode. This lets you "loop" the video infinitely so you can create an animation. The interface for editing images is pretty fast, but it still struggles to be as snappy as some more powerful programs. With Photos and then Camera Roll maximizing after adding new photos, I get this message: "Too many photos in your library. If you find that this happens intermittently, you can cause the window to hang by resizing it to a small size." I didn't get that message when I used to use the Mac version of WinCam X7, so I guess the automation that Adobe's editors added to the app has more than a bit of lag in it. Still, it's a good app and it still does what it does. The Mac version costs $24.99, while the Windows version is free. For comparison, the free version of Apple's OS X Photos app is good, but nowhere near WinCam's capabilities. In my opinion, while there are features of the Windows version of WinCam X7 that are missing in the free version of the Photos app, it still is a very good image-editing app for OS X, too.
