Hi,

I am glad to see the quick update to the review and I am especially glad you did not let all the bad Lightroom 5.2 RC bugs ruin your awesome review.

I am also a disappointed user that it took Adobe to ship all these new bugs through the beta testing or maybe they are doing that because they are waiting for next generation RAM to be available or something....

I am using this on Mac OS Sierra and noticed that I cannot access the positive square that I see on one of the pictures in the previews/preview mode.

I will add the information that I emailed as follow the notification bell:

High Performances of the raw processing won't not be there all the way in LR5.2

When you are exporting the processed image, do you experience a high response both in the saving of that image or in th exporting, because I do not have that performance.

In the last version of Lightroom, and not in the 5.2 RC, I had a choice of rendering the image without flat color (grey) - and even if I did not render well, I really did not felt any impact as I used to with the previous version (so, that was a small improvement).

So, I would appreciate to test the performance of the new version: in the export of any processed image you did you notice a tester that should be appear for each rendering settings. If you would like to test that, it is in the step of cleaning the image in various way and then, the export of the intermediate JPG file.

We would like to have your feedbacks about the performances and the bugs because we already start to think a lot about the bug fix for the future version. As you heard, we are going to fix the bugs, but here you are a first feedback about performances.

Thanks you for your review and for your time.

It's been a part of people's everyday life for more than 31 years now and has remained one of the most salient tools. Its easy to operate, typography and a friendly interface helps users enjoy their work and explore creative ideas. One of the most empowering aspects about Photoshop is the ability to edit and modify any digital image, video, or other file types. This is all possible thanks to the dynamic features of the software that allow users to easily edit their footage, edit photos, edit PDF files, and save and share them on services like Facebook, Instagram, and other social media platforms. New technologies are emerging that present an even bigger challenge to designers. Traditional design software requires users to export to many different file formats, which make today's photos, videos, and graphics even more confusing. But with web-friendly photo services like Google's P3, users will now be able to access and share their favorite photos, videos, and other files instantly without the need to export to new formats. With web browsers and the upcoming WebAssembly integration,

Photoshop can also be a web-based counterpart to any desktop application. This means that Adobe can design a HTML file that can distribute and update photo assets on a continuous basis, serving as the URL for an existing Photoshop installation. This will let Photoshop's designers access their own Digital Asset Management (DAM) directly in the browser and adjust the canvas via the web. e3d0a04c9c

**Adobe Sensei** is the name given to the newest generation of artificial intelligence (AI) which enables the power of machine learning and deep learning to automate image recognition. AI enables machines to make sense of the world around them. Adobe Sensei is a platform that gives engineers and developers authoring skills for customer experiences that go beyond mere automation and may include voice, facial, gesture, and visual recognition. You may have seen these technologies embedded in your apps recently as seen in the Photos app: From automatic

duplicate-removing, to image stabilization (Shift) before and after photo-taking on the iPhone X, and all in one, high-quality canvas. Sensei can now detect, recognize and read your photo content; caption your photo; and contextualize your smartphone in real time. Black-and-white images, with a single click of the Generation in the Adjustments panel, now have the capability to automatically generate a high dynamic range (HDR) version, without the need for multiple exposures. This generation process is one of the new capabilities in Photoshop that uses Adobe Sensei. Additionally, if you edit a photo in the application and save it out as a web photo, Sensei will intelligently bring in metadata, while preserving much of the existing file for perfect viewing on a web feed.
